GOOD NEWS!!
The issues with Walgreens/Rite Aid has been resolved.

If you have SJMH’s insurance and have purchased a prescription from one of our home host Walgreens/Rite Aid in the last 17 days and actually took the medication home with you, please advise Rhonda Mitchell at Ext. 8060 – Name, Drug, Date.

If you have SJMH’s insurance and tried to use one of our 4 Walgreens/Rite Aids in the last 17 days and did not take the medication home due to the price of the drug, you can now go back to one of the 4 Walgreens/Rite Aids and have them run the drug through the system again and you should be charged the proper co-pays (or less). I know some of you may have taken your RX to another pharmacy, just know you can return to Walgreens/Rite Aid if you rather.

This is how it will work if you:
Ordered RX at Walgreens/Rite Aid and did not pick up the prescription and did not go to another pharmacy – go back to the Walgreens/Rite Aid and you should be properly charged.
Ordered RX at Walgreens/Rite Aid and did pick it up and paid the amount charged – Have Walgreens/Rite Aid run the RX through again and see if they will reimburse you the difference that you paid versus what you should have paid.

LC Health Department and SJMH Providing Vaccines at Ireland January 30

The Lewis County Health Department and Stonewall Jackson Memorial Hospital (SJMH) are collaborating to bring a free hepatitis A vaccine clinic and flu clinic on Wednesday, January 30, 2019 to the Ireland Community Building, 65 Community Drive, Ireland, WV. Crystal Lough, director of the Lewis County Health Department is working with Mary Ann Edwards, SJMH infection preventionist, to bring this clinic to the southern part of Lewis County.

Lough points out that vaccination is the best way to prevent hepatitis A infection. Hepatitis A is a viral illness that attacks the liver. It is spread when a person ingests food or drinks, or touches surfaces contaminated with microscopic amounts of feces, from a person infected with hepatitis A.

WHAT ARE SYMPTOMS HEPATITIS A INFECTION?
- Yellow skin or eyes
- Abdominal pain
- Dark urine
- Feeling tired
- Fever
- Gray-colored stools
- Joint pain
- Loss of appetite
- Nausea
- Vomiting

HOW CAN I PROTECT MYSELF AGAINST HEPATITIS A INFECTION?
- Get your hepatitis A shot. This is the best way to protect against infection.
- Wash your hands with soap and water before preparing food, eating, and after using the bathroom or changing a diaper. Hand sanitizer does not kill the hepatitis A virus!

Lough noted that some people who are more likely to get hepatitis A include those who:
- Are homeless or have unstable housing
- Were recently in jail or prison (within the past six weeks)
- Currently use drugs (injection or non-injection)
- Are in close contact with individuals who meet any of the above criteria.
Race is Free for SJMH Employees - Bring the registration day of race.
